

# PB21110009 – Start & Stop Management Kits (SSMK)

Oliva Torras has developed a new device to responsibly and reliably manage the Start & Stop function of LCV refrigerated vehicles.

This device (SSMK) ensures that the vehicle's engine remains running when the refrigeration unit is in operation, thus respecting the cold chain.

The factors behind this development are as follows:

- Respect for the cold chain with vehicles equipped with S&S function
- The manual switch on the dashboard will soon disappear
- Request from car manufacturers.

SSMK are consistent with the car makers Body Builder's directives.

As agreed with MB, VW, M.A.N no SSMK has been developed as S&S inhibition has to be done by an authorized dealer .

SSMK are compliant with the current emission regulation as S&S is cancelled only when the refrigeration unit requires to run.

All the available SSMK references are indicated in the Oliva Torras web site  
Price discount, if any, is identical to Drive Kits pricing.
